11-5-45 PA CHEST. The heart and mediastinal shadows are normal. The lung roots and lung fields appear normal throughout. There is no evidence of any congestion or alteration in size and shape of heart.

11-5-45 AP ABDOMEN. General density of spine is normal. Psoas muscle shadows are well seen. I cannot definitely identify either kidney shadow to be sure as to their size or shape. I believe they are both present in normal position. I see no abnormal calcifications in the gu tract.

G. H. RAMSEY, M.D.
